

Theoriekolloquium

Am **9. Februar 2012** um **14.15 Uhr** in **W2 1-143** hält

Herr Prof. Henning Rehren (Göttingen)

einen Vortrag mit dem Titel

The amazing world of two-dimensional quantum fields

Traditionally, constructions or approximations of quantum field theories attempt to mimic classical field theories given, e.g., in terms of an equation of motion. For QFT models in 2 spacetime dimensions, a variety of new constructive methods has been developed in recent years which exploit algebraic ideas. The resulting quantum fields have no similarity with classical fields.
